Individuals who have earned the OPMP certification have demonstrated mastery of a body of knowledge that subject matter experts have identified as reflecting best practices in the field of operations and performance management.

The primary purpose of ASHRAE's Operations & Performance Management Professional (OPMP) certification program is to certify an individual's

Well-rounded understanding and knowledge of the management of facility operations and maintenance and their impact on HVAC&R systems' performance.

The program, which was developed in close collaboration with APPA and GSA, requires that participants meet certain eligibility criteria before being allowed to participate. In addition, OPMP certification-holders must renew their certification to ensure that they remain up-to-date in the field; renewal requires participating in 45 hours of professional development activities over a 3-year period.
