New Feature #4: Additional Fuel Accordions Feb. 2019

The Building EQ Portal has added a new feature – Additional Fuel Accordions. If your building has multiple meters for the same fuel type, you may have found it difficult to enter your additional metered data into an In Operation project.

In response to these situations, the Building EQ Portal has added more Additional Fuel Type accordions that can be used for any fuel type. This allows for the accommodation of multiple electric meters or multiple suppliers for delivered fuel types as well as for fuel types without a listed accordion.

Check out this new feature in the Building EQ Portal at
