

(This foreword is not part of this addendum but is included for information purposes only.)

FOREWORD

The purpose of this addendum is to add the refrigerant designation and safety classification for R-416A to the standard. Consolidated Addenda 34l, 34m, 34o and 34p, which previously have been recommended for publication, remove the dual classification for blends and replace with a single classification for the worst case of fractionation. If the addenda 34l, 34m, 34o, and 34p are published prior to this addendum, then R-416A shall be assigned a single safety classification of A1.

Addendum n

In Table 2, add R-416A and its footnote as shown:

Refrigerant Number	Composition (Weight %)	Safety Group
416A	R-134a/124/600 (59.0/39.5/1.5)*	A1/A1

* Composition tolerances are (+0.5, -1.0/+1.0,-0.5/+0.1,-0.2).
