FOREWORD

Draft Addendum 90.1 k – Publication Draft. These exceptions have been reworded for clarity and consistency. Exception (a) has been combined with exception (b) to clarify the intent that a separate perimeter system (zone) be provided for significant expanses of exterior wall with similar orientation, but that minor offsets in a different orientation can be included in that zone. Exception (c) has been reworded to be consistent with the terms used in other sections of the standard.

Addendum 90.1 k

Exceptions to 6.2.3.1.1: Independent perimeter systems that are designed to offset only building envelope loads shall be permitted to serve one or more zones also served by an interior system provided:

(a) there is a total exterior wall length of at least 50 ft (15m) for each exterior wall orientation in spaces served by the perimeter system.

(ba) the perimeter system includes at least one thermostatic control zone for each building exposure having exterior walls facing only one orientation for 50 contiguous ft (15m) or more, and

(eb) the perimeter system heating and cooling supply is controlled by a thermostatic control(s) located within the spaces(s) zone(s) served by the system.
