2012 HVAC Systems and Equipment

p. 6.6, Table 1. Units for rs should be (m·K)/W.

pp. 7.26-27, Figs. 36 and 38. The SI versions of these figures are provided below and at right.

p. 15.2, 2nd full para., 1st sentence. Change “insert” to “inert.”

p. 19.2, Table 1. For the rightmost four columns, the headings should be +1500, –1500, +2500, and –2500 Pa.

p. 25.1, Fig. 1. Point E was omitted. The correct figure appears below right.

p. 26.2, Eq. (2a). In the rightmost fraction, change ms to me.

p. 26.4, 1st col., top. Units for the results for w2 and w4 should be kg/kg of dry air.

p. 40.19, Table 1. In fifth column, change value in row 6 to 0.0345, and in row 7 to 0.0334.

p. 41.3, Fig. 3. Replace parts B and C of the graphic with the horizontal polymer tube shown on p. A.2.

p. 44.8, Table 1. In both equations for flow and pressure, change the minuses to equals signs.

p. 51.8. In the first column, change “44 153 kWh” to “44 513 kWh” in two places: the first line, and in the paragraph before Eq. (4). In the second column, second paragraph, equation for TES tank volume, change “44 153” to “44 513” and add “× 0.9” after “998 kg/m3.” The result remains 4738 m3.

p. 51.13, Table 4. For hour 6, Storage should be 1400 kW.

p. 51.24, Fig. 25. The bottom right line should have the discharge arrow pointing to the left, and the charge arrow pointing to the right. The corrected figure is shown on p. A.2.

Fig. 36 Effect of Inlet Pressure and Superheat on Condensing Turbine
(2012 HVAC Systems and Equipment, Ch. 7, p. 26)

Fig. 38 Single-Stage Noncondensing Turbine Efficiency
(2012 HVAC Systems and Equipment, Ch. 7, p. 27)

Fig. 1 Dehumidification Process Points
(2012 HVAC Systems and Equipment, Ch. 25, p. 1)
2013 Fundamentals

p. 1.9, 2nd col. Above Eq. (38), change “td(p, w)” to “td(p, W).”

p. 1.10, 1st col. In the table for Situation 2, 3rd line, Comments column, change “td” to “t.”

p. 4.21, Solution for Example 10, starting in 3rd para. Compute $h_i$ using Eq. (T8.5a). For $c_{pw}$, units should be J/(kg·K). Delete $f_s$ and its value. $Nu_d$ should be 248.3, and $h_i$ should be 7087 W/(m²·K). Compute $h_o$ using Eq. (T9.10a). Change $Ra$ to 74 574, $Nu$ to 7.223, $h_o$ to 3.65 W/(m²·K), and the equation for $h_{ot}$ to 3.65 + 4.3 = 7.95 W/(m²·K). Change the last paragraph in the example as follows:

Solving for $d_o$, makes the left side of Equation (42) equal to the right side, and gives $d_o = 0.04003$ m. Now, using the new value of 0.04003 m for the outer diameter, the new values of $h_o$ and $h_{ot}$ are 3.86 W/(m²·K) and 8.20 W/(m²·K), respectively. The updated value of $d_o$ is 0.04403 m. Repeating the process several times results in a final value of $d_o = 0.04717$ m. Thus, an outer diameter of 0.045 m (corresponding to an insulation radial thickness of 12.5 mm) keeps the outer surface temperature at 24.1°C, higher than the dew point. [Another method is to use Equation (42) to solve for $t_o$ for values of $d_o$ corresponding to available insulation thicknesses and using the insulation thickness that keeps $t_o$ above the dew-point temperature.]

p. 9.19, 1st col. For Eq. (71), remove the minus sign before “(tsk – 34).” In the following definitions, add that $t_{bset}$ should be 36.49°C. In Eq. (72), change the minus in the denominator to a plus. In the paragraph below Eq. (74), $ρ_{bl}$ should be 1 kg/L.

p. 9.23, after Eq. (83). WCI should be multiplied by 1.163 to get W/m².

Ch. 14, climate data table for Esbjerg, Denmark. Please use the 2009 data for this location.

p. 14.3, Table 1A. Change “Hours 8/4 & 55/69” to “Hours 8/4 & 12.8/20.6.”

p. 15.10, Example 1. Replace “m/s” with “km/h” (in six places).

p. 15.11, 2nd col. At the end of Example 3, change “R-20” to “R-3.5.”

p. 15.17, Eq. (13). The equals sign belongs after “SHGC(θ).”

p. 15.29, Example 6, Solution. The first equation should read $q_s = q_b + q_d$.

p. 15.32, Eq. (40). Change “min(1.002 × Ω)” to “min(1.2Ω, 60/60).” Add Barnaby et al. (2009) to the list of sources cited below.

p. 16.11, definitions for Eq. (35). The unit for $q_l$ should be watts.

p. 16.25, 1st col., bottom. The equation at the bottom of the column should be numbered (51), and all later numbered equations should increase by one. Text references to equations remain the same.

p. 17.12-13, Fig. 1 and Table 19. The corrected figure is shown above. In Table 19, floor area should be 195.3 m².

p. 18.13, Heat Gain Calculations Using Standard Air Values. End of last sentence in item 1, add “per kJ/kg” before “enthalpy $h_i$.” In last sentence before Eq. (1), change “(in W)” to “(in kilowatts).”

pp. 18.24-26, Tables 16 and 17. In the Layer ID row, the reference should be to Table 18.

p. 18.35, 2nd col. Just above the Plenums in Load Calculations heading, the citation for the UFAD Design Guide should be ASHRAE (2013).

p. 18.38, 2nd col. For “Beam normal irradiance $E_b$,” the last equation should be $E_b = 1324 \exp[-0.440(1.890/0.70550.75)]$. The end result remains the same.

p. 18.41, 1st col. In equation for $q_{15}$, the last term on the first line should be $c_{23}q_{16}$. [Another method is to use Equation (42) to solve for $t_o$ for values of $d_o$ corresponding to available insulation thicknesses and using the insulation thickness that keeps $t_o$ above the dew-point temperature.]

Fig. 3 Indirect Evaporative Cooling (IEC) Heat Exchanger

(2012 HVAC Systems and Equipment, Ch. 41, p. 3. Replaces only parts B and C of Fig. 3.)

Fig. 1 Example House

(2013 Fundamentals, Ch. 17, p. 12)

Fig. 25 Typical Sensible Storage Connection Scheme

(2012 HVAC Systems and Equipment, Ch. 51, p. 24)

p. 18.42, Table 29B. Under Heat Gain, Convective should be 54%, and Radiant should be 46%.

p. 18.49, References. Delete the Bauman and Daly 2013 source, and replace it with the following:
ASHRAE. 2013. *Underfloor air distribution (UFAD) design guide*, 2nd ed.

p. 20.1, 1st col. Immediately after the bulleted list, change the paragraph as follows: “As shown in Figure 1, local temperature concentration has a similar profile, although its rate usually differs. Carbon dioxide (CO2) follows a similar pattern.”

p. 21.20, 2nd col., 3rd para. from bottom. The reference to Figure 16 should be to Figure 21, and the reference to Figure 10 should be to Figure 9.

p. 21.22, step 9c. The correct section in ASHRAE Standard 90.1 is 6.5.3.1.

p. 22.2, 2nd col. Change “(Table 8 and Figure 7)” to “(Tables 6 and 10).”

p. 23.18, definitions for Eq. (8). The symbol for outer radius should be \( r_2 \); for inner radius, it should be \( r_1 \).

p. 27.2, 2nd col. Data for elements 2 and 5 and the total should be as follows:

<table>
<thead>
<tr>
<th>Element</th>
<th>( R ) (m²·K)/W</th>
</tr>
</thead>
<tbody>
<tr>
<td>2. 100 mm concrete, 1920 kg/m³, ( k = 1.1 )</td>
<td>0.09</td>
</tr>
<tr>
<td>5. 10 mm built-up roof membrane</td>
<td>0.06</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>5.83</strong></td>
</tr>
</tbody>
</table>

p. 27.3, 2nd col. For element 1, wind speed should be 6.7 m/s.

p. 27.4, 1st col., Example 3. In the elements table, wind speed for element 1 should be 6.7 m/s. After the equation for \( U_{\text{Assembly}} \), change “300 mm” to “600 mm.”

p. 27.4, 1st col., Example 4. On fourth line, face shell thickness should be 32 mm. In the Solution, wind speed for \( R_o \) should be 6.7 m/s.

p. 27.4, 1st col., 2nd full para. The steel member should be 90 mm deep.

2014 Refrigeration

p. 12.14, Fig. 13. Change “polyoxypropylene” to “polyalkylene.”

p. 24.1, 1st paragraph under Eq. (2). Change 1.6 to 9.1, and 6 to 34.

p. 24.6, definitions for Eq. (16). In the definition for \( q_s/A \), the reference should be to Figure 9.

Index, p. I.35. Add the following entry:

Total equivalent warming impact (TEWI), F29.5, R15.20

2015 HVAC Applications

Contributors List. The following people should be credited for work on Ch. 43 instead of Ch. 17:

- **John Castelvecchi**  
  Shultz and James, Inc.

- **Will Mak**  
  Cyclone Energy Group

- **Svein Morner**  
  Sustainable Engineering Group LLC

- **Charlie Chun-Lun Shieh**  
  CYS Consulting, LLC

Contributors List. Add the following contributor to Ch. 60:

- **Forrest Fencl**  
  UV Resources

pp. 4.4-5. For Dubai discussion, p. 4, change “Table 9” to “Table 8.” For Copenhagen discussion, p. 5, change “Table 7” to “Table 8,” and “Table 8” to “Table 7.”

p. 12.5, top of 1st col. In definition of \( \Delta P \), unit should be Pa.

pp. 48.18-19, Eq. (4) and following text. Change “\( f_{co} \)” to “\( f_{cp} \)”

p. 48.19, definitions after Eq. (5). The definition for \( \alpha_0 \) should refer to Equation (6), not Equation (8).

p. 50.5, definitions after Eqs. (4) and (8). Change \( c_p \) to 4186.8 J/(kg·K). For \( (Mcp)_{w,p,i} \), change unit to J/(m·K).

Index, p. I.36. Add the following entry:

Total equivalent warming impact (TEWI), F29.5, R15.20
