**30-day Public Review from
October 13, 2017 to November 12, 2017**

- ♦ **2nd Public Review Addendum a to ANSI/ASHRAE Standard 62.2-2016, *Ventilation and Acceptable Indoor Air Quality in Residential Buildings***

Standard 62.2 first included unvented space heaters within its scope in the 2013 edition. This proposed addendum would represent the first requirements related to these devices. It would prohibit unvented space heaters from being used in 62.2-compliant dwellings unless they were listed to ANSI Standard Z21.11.2, 2002 or later. For appliances that do meet an eligible ANSI standard, it would limit the heating capacity of heaters based on volume of the space in which they are located, with the goal of guaranteeing that nitrogen dioxide levels would not exceed current EPA standards

**45-day Public Review from
October 13, 2017, to November 27, 2017**

- ♦ **2nd Public Review of BSR/ASHRAE/ASPE/AWWA Standard 191P, *Standard for the Efficient Use of Water in Building Mechanical Systems***

ASHRAE Standard 191P provides baseline requirements for the design of mechanical systems that minimize the volume of water required to operate HVAC systems.
