CALL FOR PAPERS AND CASE STUDIES
CIBSE ASHRAE Technical Symposium 2020
Engineering Buildings, Systems and Environments for Effective Operation
Strathclyde University, Glasgow, Scotland
16-17 April 2020

Mitigating and adapting for a changing climate will reshape the engineering of the built environment and the systems which make our buildings habitable. This will influence not only what is built but importantly must inform the procedures and processes for maintenance and refurbishment to ensure lifelong effective operation, low environmental impact and occupant safety and wellbeing.

The intended context of the Technical Symposium is to focus on aspects that are of interest to ASHRAE and CIBSE members and the wider society including building related energy, acoustics, comfort, IEQ, acoustic, electrical systems, fire safety, IT, lighting, thermal performance, public health, internal and external transportation, facilities and information management, security, ventilation and associated standards and systems.

The tenth annual Technical Symposium looks to encourage the participation of both young and experienced industry practitioners, researchers and building users to share experiences and develop networks.

This invitation is for research papers, posters technical reviews, case studies and opinion presentations that are based on recent or current research or application as well as those that examine actual or potential impact on the built environment.

Speaker registration fees are planned to be no more than £125 / $160 for 2-day attendance including refreshments, lunches and informal evening dinner reception.

Submit your 250-word abstract online by 16th September 2019

For further information visit www.cibse.org/symposium

Not just for academics...
The Symposium committee is keen to encourage the presentation of slides to illustrate case studies supported by brief keynotes, as opposed to a formally reviewed paper. This could be suitable for practicing:
• Designers
• Contractors
• Consultants
• Commissioning engineers
• Controls engineers
• Building operators
• Building maintainers

TIMELINE
16 September 2019 - Abstracts due
October 2019 - Selected authors advised
December 2019 - Draft manuscripts due
January 2020 - Authors receive reviewers’ comments
February 2020 – Submit reviewed, final submission
