

Aaron Duda, PE, Principal

Aaron is a Professional Mechanical Engineer and a LEED AP BD+C, with over 15 years of experience in mechanical system design and installation, construction documentation, and administration of mission critical projects. He has worked on numerous enterprise and colocation data centers across the US and abroad. Aaron's extensive mechanical knowledge includes flexible compressorless heat rejection systems and mixed economizer heat rejection strategies. He has designed large scale concurrently maintainable chilled fluid systems and direct and indirect evaporative heat rejection systems. Aaron's strength is in understanding client's current system capabilities and future needs in order to achieve and surpass all project goals.
