

CONTENTS

Preface	xi
Part I General Concepts	
Chapter 1—Past, Present, and Future	
Introduction	3
Past.....	5
Present	9
Future.....	12
References	14
Bibliography	14
Problems	15
Chapter 2—Thermodynamics and Psychrometrics	
Fundamental Concepts and Principles	17
Laws of Thermodynamics	22
Properties of a Substance.....	28
Psychrometrics.....	37
Thermodynamics Applied to Refrigeration.....	44
Applying Thermodynamics to Heat Pumps.....	50
Absorption Refrigeration Cycle.....	52
References and Bibliography.....	53
Problems	53
Resource	61
I-P Resources	62
SI Resources	80
Chapter 3—Basic HVAC System Calculations	
Applying Thermodynamics to HVAC Processes	95
Determination of Sensible, Latent, and Total Energy Gains.....	102
Approximate Equations Using Volume Flow Rates.....	104
Air-Volume Equations for Single-Path Systems	104
Psychrometric Representation of Single-Path Systems.....	106
Sensible Heat Factor (Sensible Heat Ratio)	108
References and Bibliography.....	110
Problems	110
Chapter 4—Design Conditions	
Indoor Design Conditions.....	115
Outdoor Design Conditions: Weather Data.....	126
Other Factors Affecting Design.....	134
Temperatures in Adjacent Unconditioned Spaces.....	135
References and Bibliography.....	136
Problems	137
I-P Resources	139
SI Resources	147

Chapter 5—Space Loads

Introduction	157
Background	157
Heat Transfer Coefficients	159
Calculating Surface Temperatures	165
Heat Loss	168
Heat Gain.....	175
Space Load Influence on Design.....	193
References and Bibliography	197
Problems.....	198
I-P Resources.....	201
SI Resources	216

Chapter 6—System Loads

Introduction	231
Outdoor Air Load	235
Miscellaneous System Loads	243
System Load Calculations	245
Load Application in Design	249
References	250
Problems.....	250
Resource	254

Chapter 7—Energy Estimating Methods

General Considerations	259
Component Modeling and Loads	260
Overall Modeling Strategies.....	261
Integration of System Models	263
Degree-Day Methods	265
Bin Method (Heating and Cooling).....	271
References and Bibliography	275
Problems.....	275
Resources	279

Chapter 8—Duct and Pipe Sizing

Duct Systems.....	287
Fans	300
Air-Diffusing Equipment	308
Pipe, Tube, and Fittings.....	311
Pumps	325
References	330
Bibliography	332
Problems.....	334
Resources	340
I-P Resources.....	356
SI Resources	360

Part II HVAC Systems**Chapter 9—Air-Conditioning System Concepts**

System Objectives and Categories	371
System Selection and Design	373
Design Parameters.....	373

Performance Requirements.....	373
Focusing on System Options.....	374
Narrowing the Choice.....	375
Basic Central Air-Conditioning and Distribution System.....	375
Smoke Management.....	377
Components.....	377
Air Distribution.....	380
Space Heating.....	381
Primary Systems.....	382
Space Requirements.....	385
References and Bibliography.....	387
Problems.....	388
Chapter 10—System Configurations	
Introduction.....	389
Selecting the System.....	391
Secondary System Descriptions.....	391
Ventilation and Dedicated Outdoor Air System (DOAS).....	395
In-Space Temperature Control Systems.....	398
References and Bibliography.....	408
Problems.....	409
Chapter 11—Hydronic Heating and Cooling System Design	
Introduction.....	415
Closed Water Systems.....	416
Design Considerations.....	431
Design Procedures.....	443
References.....	447
Bibliography.....	448
Problems.....	448
Chapter 12—Unitary and Room Air Conditioners and Heat Pumps	
Unitary Air Conditioners.....	451
Combined Unitary and Dedicated Outdoor Air Systems.....	454
Window Air Conditioners.....	455
Through-the-Wall Conditioner System.....	457
Typical Performance.....	459
Minisplits, Multisplits, and Variable-Refrigerant-Flow (VRF) Systems.....	459
Heat Pumps.....	461
Heat Sources and Sinks.....	464
References.....	467
Problems.....	467
Appendix—Units and Conversions.....	469
Index.....	473

Part III Online Supplemental Materials

The following materials are available for free to purchasers of this book.

- Air-Processing Equipment** (*includes problems at end of material*)
- Climatic Design Conditions for Selected U.S. Cities**

Cogeneration and Heat Recovery Systems (*includes problems at end of material*)
Design Conditions for Selected Locations—I-P
Design Conditions for Selected Locations—SI
Economic Analyses and Life-Cycle Costs (*includes problems at end of material*)
Fitting Loss Coefficients
Heat Exchange Equipment (*includes problems at end of material*)
Heating Equipment (*includes problems at end of material*)
Panel Heating and Cooling Systems (*includes problems at end of material*)
Psychrometric Charts Nos. 1, 2, and 4 (I-P) and 1, 2, and 6 (SI)
Refrigeration Equipment (*includes problems at end of material*)
Radiant Time Series (RTS) Method
RTS Method Load Calculation Spreadsheets in Microsoft® Excel®
Systems Design Problems
