### 30-day Public Review from June 17, 2022 to July 17, 2022

- **1st Public Review of BSR/ASHRAE Addendum f to Standard 30-2019, Method of Testing Liquid Chillers**
  This addendum adds a Microsoft® Excel® workbook to facilitate calculations in accordance with Section 8.4 and adds a new Informative Appendix C with link and description to the supplemental Microsoft® Excel® workbook.

  This ISC modifies the proposed new fan power limit requirements (6.5.3.1) to include additional allowances for certain equipment and to make some necessary clarifications and error corrections.

### 45-day Public Review from June 17, 2022 to August 1, 2022

  The purpose of this addendum is to formalize the definition of the 'data_attributes' Parameter, redefine 'Must Understand' for data options, and make changes to segmentation to enforce data attribute consistency.

  This addendum defines a standard and interoperable mechanism for authenticating and authorizing devices to take actions in other devices. It is based on the Internet standards OAuth 2.0, OpenID Connect, ACE-OAuth, and the suite of RFCs that define the data structures that support these protocols; makes changes to BACnet/SC to Support Authentication and Authorization; adds new service clause AuthRequest; adds informative examples of some message exchanges and data structures; and makes changes to existing Services to Support Authentication and Authorization.
