

# ADDENDA

**ANSI/ASHRAE/IES Addendum aq to  
ANSI/ASHRAE/IES Standard 90.1-2019**

# Energy Standard for Buildings Except Low-Rise Residential Buildings

Approved by ASHRAE and the American National Standards Institute on July 29, 2022, and by the Illuminating Engineering Society on July 26, 2022.

This addendum was approved by a Standing Standard Project Committee (SSPC) for which the Standards Committee has established a documented program for regular publication of addenda or revisions, including procedures for timely, documented, consensus action on requests for change to any part of the standard. Instructions for how to submit a change can be found on the ASHRAE® website (<https://www.ashrae.org/continuous-maintenance>).

The latest edition of an ASHRAE Standard may be purchased on the ASHRAE website ([www.ashrae.org](http://www.ashrae.org)) or from ASHRAE Customer Service, 180 Technology Parkway NW, Peachtree Corners, GA 30092. E-mail: [orders@ashrae.org](mailto:orders@ashrae.org). Fax: 678-539-2129. Telephone: 404-636-8400 (worldwide), or toll free 1-800-527-4723 (for orders in US and Canada). **SPECIAL NOTE**

This American National Standard (ANS) is a national voluntary consensus Standard developed under the auspices of ASHRAE. *Consensus* is defined by the American National Standards Institute (ANSI), of which ASHRAE is a member and which has approved this Standard as an ANS, as “substantial agreement reached by directly and materially affected interest categories. This signifies the concurrence of more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that an effort be made toward their resolution.” Compliance with this Standard is voluntary until and unless a legal jurisdiction makes compliance mandatory through legislation.

ASHRAE obtains consensus through participation of its national and international members, associated societies, and public review.

ASHRAE Standards are prepared by a Project Committee appointed specifically for the purpose of writing the Standard. The Project Committee Chair and Vice-Chair must be members of ASHRAE; while other committee members may or may not be ASHRAE members, all must be technically qualified in the subject area of the Standard. Every effort is made to balance the concerned interests on all Project Committees.

The Senior Manager of Standards of ASHRAE should be contacted for

- interpretation of the contents of this Standard,
- participation in the next review of the Standard,
- offering constructive criticism for improving the Standard, or
- permission to reprint portions of the Standard.

---

**DISCLAIMER**

ASHRAE uses its best efforts to promulgate Standards and Guidelines for the benefit of the public in light of available information and accepted industry practices. However, ASHRAE does not guarantee, certify, or assure the safety or performance of any products, components, or systems tested, installed, or operated in accordance with ASHRAE's Standards or Guidelines or that any tests conducted under its Standards or Guidelines will be nonhazardous or free from risk.

---

**ASHRAE INDUSTRIAL ADVERTISING POLICY ON STANDARDS**

ASHRAE Standards and Guidelines are established to assist industry and the public by offering a uniform method of testing for rating purposes, by suggesting safe practices in designing and installing equipment, by providing proper definitions of this equipment, and by providing other information that may serve to guide the industry. The creation of ASHRAE Standards and Guidelines is determined by the need for them, and conformance to them is completely voluntary.

In referring to this Standard or Guideline and in marking of equipment and in advertising, no claim shall be made, either stated or implied, that the product has been approved by ASHRAE.

(This foreword is not part of this standard. It is merely informative and does not contain requirements necessary for conformance to the standard. It has not been processed according to the ANSI requirements for a standard and may contain material that has not been subject to public review or a consensus process. Unresolved objectors on informative material are not offered the right to appeal at ASHRAE or ANSI.)

## FOREWORD

The piping insulation thickness requirements in Table 6.8.3-1 were developed primarily for space heating. Addendum aq creates new Table 7.4 for service water heating (SWH) piping insulation in Section 7.4. The proposed changes are based on typical SWH operation and operating temperatures.

Section 6.8.3, "Piping Insulation Tables," has been reorganized. Two footnote items were moved to the body of the standard to make them easier to read. The first is the equation for calculating the minimum required insulation thickness when the insulation's thermal conductivity is outside the range in the table. The second is the language that allows designers to calculate an alternative minimum thickness for nonsteel pipe that is thicker than schedule 80. This reorganization does not change the requirements of the standard.

The values reflect 2021 utility rates, fiberglass pipe insulation cost from 2020 RS Means data and scalar compliance based on a service water heating pipe insulation lifetime of 30 years.

**Note:** In this addendum, changes to the current standard are indicated in the text by underlining (for additions) and ~~striking through~~ (for deletions) unless the instructions specifically mention some other means of indicating the changes.

### Addendum aq to Standard 90.1-2019

**Modify Section 6.8.3 and Tables 6.8.3-1 and 6.8.3-2 as shown (I-P and SI).**

**6.8.3 Piping Insulation Tables.** Hot-water heating, steam heating, and steam condensate piping shall be insulated to the minimum thickness required in Tables 6.8.3-1 and 6.8.3-2 and shall either utilize insulation within the thermal conductivity ranges in the tables, or, when the insulation thermal conductivity is not within the range in the tables, the following equation shall be used to calculate the minimum insulation thickness:

$$t_{alt} = r[(1 + t_{table}/r) \times k_{alt}/k_{upper} - 1]$$

where

$t_{alt}$  = minimum insulation thickness of the alternate material, in. (mm)

$r$  = actual outside radius of pipe, in. (mm)

$t_{table}$  = insulation thickness listed in Table 6.8.3-1 or Table 6.8.3-2 for applicable fluid temperature and pipe size

$k_{alt}$  = thermal conductivity of the alternate material at mean rating temperature indicated for the applicable fluid temperature, Btu·in/h·ft<sup>2</sup>·°F (W/[m·°C])

$k_{upper}$  = upper value of the thermal conductivity range listed in this table for the applicable fluid temperature, Btu·in/h·ft<sup>2</sup>·°F (W/[m·°C])

**Exception to 6.8.3:** For nonmetallic piping thicker than Schedule 80 and having thermal resistance greater than that of steel pipe, reduced insulation thicknesses are permitted if documentation is provided showing that the pipe with the proposed insulation has no more heat transfer per foot (metre) than a steel pipe of the same size with the insulation thickness shown in the tables.

**Modify Tables 6.8.3-1 and 6.8.3-2 as shown (I-P).**

**Table 6.8.3-1 Minimum Piping Insulation Thickness for Heating and Hot Water Systems<sup>a,b,c,d,e</sup>**  
(Steam, Steam Condensate, and Hot-Water Heating and Domestic Water Systems)

Fluid Operating Temperature Range, °F, and Usage	Insulation <i>Thermal Conductivity</i> Conductivity		Nominal Pipe or Tube Size, in.				
	Conductivity, Btu·in/h·ft <sup>2</sup> ·°F	Mean Rating Temperature, °F	<1	1 to <1-1/2	1-1/2 to <4	4 to <8	≥8
			Insulation Thickness, in.				
>350	0.32 to 0.34	250	4.5	5.0	5.0	5.0	5.0
251 to 350	0.29 to 0.32	200	3.0	4.0	4.5	4.5	4.5
201 to 250	0.27 to 0.30	150	2.5	2.5	2.5	3.0	3.0
141 to 200	0.25 to 0.29	125	1.5	1.5	2.0	2.0	2.0
105 to 140	0.22 to 0.28	100	1.0	1.0	1.5	1.5	1.5

For service water heating systems, see Table 7.4.

- a. For insulation outside the stated conductivity range, the minimum thickness ( $T$ ) shall be determined as follows:  $T = r \{ (1 + t/r)^{K/k} - 1 \}$ , where  $T$  = minimum insulation thickness (in.),  $r$  = actual outside radius of pipe (in.),  $t$  = insulation thickness listed in this table for applicable fluid temperature and pipe size,  $K$  = conductivity of alternate material at mean rating temperature indicated for the applicable fluid temperature (Btu·in/h·ft<sup>2</sup>·°F); and  $k$  = the upper value of the conductivity range listed in this table for the applicable fluid temperature.
- ab. These thicknesses are based on *energy efficiency* considerations only. Additional insulation is sometimes required relative to safety issues/surface temperature.
- bc. For piping smaller than 1.5 in. and located in partitions within *conditioned spaces*, reduction of these thicknesses by 1 in. shall be permitted (before thickness adjustment required in footnote [a]) but not to thicknesses below 1 in.
- cd. For direct-buried heating and hot-water system piping, reduction of these thicknesses by 1.5 in. shall be permitted (before thickness adjustment required in footnote [a]) but not to thicknesses below 1.5 in.
- e. The table is based on steel pipe. Nonmetallic pipes schedule 80 thickness or less shall use the table values. For other nonmetallic pipes having *thermal resistance* greater than that of steel pipe, reduced insulation thicknesses are permitted if documentation is provided showing that the pipe with the proposed insulation has no more heat transfer per foot than a steel pipe of the same size with the insulation thickness shown in the table.
- d. Piping that also serves *service water heating systems* shall comply with Section 7.4.

**Table 6.8.3-2 Minimum Piping Insulation Thickness Cooling Systems (Chilled Water, Brine, and Refrigerant)<sup>a,b,e,d</sup>**

Fluid Operating Temperature Range, °F, and Usage	Insulation <i>Thermal Conductivity</i> Conductivity		Nominal Pipe or Tube Size, in.				
	Conductivity, Btu·in/h·ft <sup>2</sup> ·°F	Mean Rating Temperature, °F	<1	1 to <1-1/2	1-1/2 to <4	4 to <8	≥8
			Insulation Thickness, in.				
40 to 60	0.21 to 0.27	75	0.5	0.5	1.0	1.0	1.0
<40	0.20 to 0.26	50	0.5	1.0	1.0	1.0	1.5

- a. For insulation outside the stated conductivity range, the minimum thickness ( $T$ ) shall be determined as follows:  $T = r \{ (1 + t/r)^{K/k} - 1 \}$ , where  $T$  = minimum insulation thickness (in.),  $r$  = actual outside radius of pipe (in.),  $t$  = insulation thickness listed in this table for applicable fluid temperature and pipe size,  $K$  = conductivity of alternate material at mean rating temperature indicated for the applicable fluid temperature (Btu·in/h·ft<sup>2</sup>·°F); and  $k$  = the upper value of the conductivity range listed in this table for the applicable fluid temperature.
- ab. These thicknesses are based on *energy efficiency* considerations only. Issues such as water vapor permeability or surface condensation sometimes require vapor retarders or additional insulation.
- bc. For direct-buried cooling system piping, insulation is not required.
- d. The table is based on steel pipe. Nonmetallic pipes schedule 80 thickness or less shall use the table values. For other nonmetallic pipes having *thermal resistance* greater than that of steel pipe, reduced insulation thicknesses are permitted if documentation is provided showing that the pipe with the proposed insulation has no more heat transfer per foot than a steel pipe of the same size with the insulation thickness shown in the table.

**Modify Tables 6.8.3-1 and 6.8.3-2 as shown (SI).**

**Table 6.8.3-1 Minimum Piping Insulation Thickness for Heating and Hot Water Systems<sup>a,b,c,d,e</sup>**  
(Steam, Steam Condensate, and Hot-Water Heating and Domestic Water Systems)

Fluid Operating Temperature Range, °C, and Usage	Insulation <del>Thermal Conductivity</del> <b>Conductivity</b>		Nominal Pipe or Tube Size, mm				
	Conductivity, W/(m·°C)	Mean Rating Temperature, °C	<25	25 to <40	40 to <100	100 to <200	≥200
			Insulation Thickness, mm				
>177	0.046 to 0.049	121	115	125	125	125	125
122 to 177	0.042 to 0.046	93	80	100	115	115	115
94 to 121	0.039 to 0.043	66	65	65	80	80	80
61 to 93	0.036 to 0.042	52	40	40	50	50	50
41 to 60	0.032 to 0.040	38	25	25	40	40	40

For service water heating systems, see Table 7.4.

- a. For insulation outside the stated conductivity range, the minimum thickness ( $T$ ) shall be determined as follows:  $T = r \{ (1 + t/r)^{K/k} - 1 \}$ , where  $T$  = minimum insulation thickness (mm);  $r$  = actual outside radius of pipe (mm);  $t$  = insulation thickness listed in this table for applicable fluid temperature and pipe size;  $K$  = conductivity of alternate material at mean rating temperature indicated for the applicable fluid temperature (W/(m·°C)); and  $k$  = the upper value of the conductivity range listed in this table for the applicable fluid temperature.
- ab. These thicknesses are based on energy efficiency considerations only. Additional insulation is sometimes required relative to safety issues/surface temperature.
- be. For piping smaller than 40 mm and located in partitions within conditioned spaces, reduction of these thicknesses by 25 mm shall be permitted (before thickness adjustment required in footnote [a]) but not to thicknesses below 25 mm.
- cd. For direct-buried heating and hot-water system piping, reduction of these thicknesses by 40 mm shall be permitted (before thickness adjustment required in footnote [a]) but not to thicknesses below 25 mm.
- e. The table is based on steel pipe. Nonmetallic pipes schedule 80 thickness or less shall use the table values. For other nonmetallic pipes having thermal resistance greater than that of steel pipe, reduced insulation thicknesses are permitted if documentation is provided showing that the pipe with the proposed insulation has no more heat transfer per metre than a steel pipe of the same size with the insulation thickness shown in the table.
- d. Piping that also serves service water heating systems shall comply with Section 7.4.

**Table 6.8.3-2 Minimum Piping Insulation Thickness Cooling Systems (Chilled Water, Brine, and Refrigerant)<sup>a,b,e,d</sup>**

Fluid Operating Temperature Range, °C, and Usage	Insulation <del>Thermal Conductivity</del> <b>Conductivity</b>		Nominal Pipe or Tube Size, mm				
	Conductivity, W/(m·°C)	Mean Rating Temperature, °C	<25	25 to <40	40 to <100	100 to <200	≥200
			Insulation Thickness, mm				
4 to 16	0.030 to 0.039	24	13	13	25	25	25
<4	0.029 to 0.037	10	13	25	25	25	40

- a. For insulation outside the stated conductivity range, the minimum thickness ( $T$ ) shall be determined as follows:  $T = r \{ (1 + t/r)^{K/k} - 1 \}$ , where  $T$  = minimum insulation thickness (mm);  $r$  = actual outside radius of pipe (mm);  $t$  = insulation thickness listed in this table for applicable fluid temperature and pipe size;  $K$  = conductivity of alternate material at mean rating temperature indicated for the applicable fluid temperature (W/(m·°C)); and  $k$  = the upper value of the conductivity range listed in this table for the applicable fluid temperature.
- ab. These thicknesses are based on energy efficiency considerations only. Issues such as water vapor permeability or surface condensation sometimes require vapor retarders or additional insulation.
- be. For direct-buried cooling system piping, insulation is not required.
- d. The table is based on steel pipe. Nonmetallic pipes schedule 80 thickness or less shall use the table values. For other nonmetallic pipes having thermal resistance greater than that of steel pipe, reduced insulation thicknesses are permitted if documentation is provided showing that the pipe with the proposed insulation has no more heat transfer per foot than a steel pipe of the same size with the insulation thickness shown in the table.

**Modify Section 7.4.3 as shown (I-P and SI).**

**7.4.3 Service ~~Hot-Water Heating System~~ Piping Insulation.** ~~The following Service water heating system piping shall be insulated to levels surrounded by uncompressed insulation of the thickness shown in Section 6, Table 6.8.1-3 Table 7.4. When the insulation thermal conductivity is not within the range in the table, the following equation shall be used to calculate the minimum insulation thickness:~~

$$t_{alt} = r[(1 + t_{table}/r) \times k_{alt}/k_{upper} - 1]$$

where

$t_{alt}$  = minimum insulation thickness of the alternate material, in. (mm)

$r$  = actual outside radius of pipe, in. (mm)

$t_{table}$  = insulation thickness listed in Table 7.4 for applicable fluid temperature and pipe size

$k_{alt}$  = thermal conductivity of the alternate material at mean rating temperature indicated for the applicable fluid temperature, Btu·in/h·ft<sup>2</sup>·°F (W/[m·°C])

$k_{upper}$  = upper value of the thermal conductivity range listed in this table for the applicable fluid temperature, Btu·in/h·ft<sup>2</sup>·°F (W/[m·°C])

**Exception to 7.4.3:** For nonmetallic piping thicker than Schedule 80 and having thermal resistance greater than that of steel pipe, reduced insulation thicknesses are permitted if documentation is provided showing that the pipe with the proposed insulation has no more heat transfer per foot (metre) than a steel pipe of the same size with the insulation thickness shown in the table.

**7.4.3.1** The following piping shall be insulated to levels shown in Section 6, Table 6.8.1-3 per the requirements of this section:

- a. ~~Recirculating system piping, including the supply and return piping of a circulating tank type water heater.~~
- b. The first 8 ft (2.4 m) of outlet piping for ~~from~~ a constant temperature nonrecirculating storage system.
  1. storage water heaters,
  2. hot-water storage tanks, and
  3. any water heater and hot-water supply boiler containing 10 gal (38 L) or more of water heated by a direct heat source, an indirect heat source, or both a direct heat source and an indirect heat source.
- c. The first 8 ft (2.4m) of branch piping connecting to recirculated, ~~heat traced~~ heat traced, or impedance heated piping.
- d. The make-up water inlet piping between heat traps (see Section 7.4.6) and the storage water heaters and the storage tanks they are serving, and a heat trap in a nonrecirculating nonrecirculating service water heating storage system.
- e. Hot-water piping between multiple water heaters, between multiple hot-water storage tanks, and between water heaters and hot-water storage tanks.
- ef. Piping that is externally heated (such as *heat trace* or impedance heating).

**Exceptionsto 7.4.3.1:**

1. Factory-installed piping within water heaters and hot-water storage tanks tested and rated in accordance with Section 6.4.1.
2. Piping that conveys hot water that has not been heated through the use of fossil fuels or electricity.
3. For piping 1 in. (25 mm) or less, insulation is not required for valves or strainers.
4. Piping in existing buildings where alterations are made to existing service water heating systems where there is insufficient space or access to meet the requirements.
5. Insulation is not required at the point where piping passes through a framing member if it requires increasing the size of the framing member.
6. Insulation is not required on piping at the point where a vertical support of the piping is installed.

Add new Table 7.4 as shown (I-P).

**Table 7-4 Minimum Piping Insulation Thickness for Service Water Heating Systems<sup>a,b</sup>**

<u>Service Hot-Water Temperature Range</u>	<u>Insulation Thermal Conductivity</u>		<u>Nominal Pipe or Tube Size, in.</u>				
	<u>Conductivity, Btu·in/h·ft<sup>2</sup>·°F</u>	<u>Mean Rating Temperature, °F</u>	<u>≤1</u>	<u>1 to &lt;1-1/2</u>	<u>1-1/2 to &lt;4</u>	<u>4 to &lt;8</u>	<u>≥8</u>

a. These thicknesses are based on *energy efficiency* considerations only. Additional insulation may be necessary for safety.

b. For direct-buried *service water heating system piping*, reduction of these thicknesses by 35 mm shall be permitted (before thickness adjustment required in Section 7.4.3 but not to thicknesses less than 25 mm).

## **POLICY STATEMENT DEFINING ASHRAE'S CONCERN FOR THE ENVIRONMENTAL IMPACT OF ITS ACTIVITIES**

ASHRAE is concerned with the impact of its members' activities on both the indoor and outdoor environment. ASHRAE's members will strive to minimize any possible deleterious effect on the indoor and outdoor environment of the systems and components in their responsibility while maximizing the beneficial effects these systems provide, consistent with accepted Standards and the practical state of the art.

ASHRAE's short-range goal is to ensure that the systems and components within its scope do not impact the indoor and outdoor environment to a greater extent than specified by the Standards and Guidelines as established by itself and other responsible bodies.

As an ongoing goal, ASHRAE will, through its Standards Committee and extensive Technical Committee structure, continue to generate up-to-date Standards and Guidelines where appropriate and adopt, recommend, and promote those new and revised Standards developed by other responsible organizations.

Through its *Handbook*, appropriate chapters will contain up-to-date Standards and design considerations as the material is systematically revised.

ASHRAE will take the lead with respect to dissemination of environmental information of its primary interest and will seek out and disseminate information from other responsible organizations that is pertinent, as guides to updating Standards and Guidelines.

The effects of the design and selection of equipment and systems will be considered within the scope of the system's intended use and expected misuse. The disposal of hazardous materials, if any, will also be considered.

ASHRAE's primary concern for environmental impact will be at the site where equipment within ASHRAE's scope operates. However, energy source selection and the possible environmental impact due to the energy source and energy transportation will be considered where possible. Recommendations concerning energy source selection should be made by its members.

## **About ASHRAE**

Founded in 1894, ASHRAE is a global professional society committed to serve humanity by advancing the arts and sciences of heating, ventilation, air conditioning, refrigeration, and their allied fields.

As an industry leader in research, standards writing, publishing, certification, and continuing education, ASHRAE and its members are dedicated to promoting a healthy and sustainable built environment for all, through strategic partnerships with organizations in the HVAC&R community and across related industries.

To stay current with this and other ASHRAE Standards and Guidelines, visit [www.ashrae.org/standards](http://www.ashrae.org/standards), and connect on LinkedIn, Facebook, Twitter, and YouTube.

## **Visit the ASHRAE Bookstore**

ASHRAE offers its Standards and Guidelines in print, as immediately downloadable PDFs, and via ASHRAE Digital Collections, which provides online access with automatic updates as well as historical versions of publications. Selected Standards and Guidelines are also offered in redline versions that indicate the changes made between the active Standard or Guideline and its previous version. For more information, visit the Standards and Guidelines section of the ASHRAE Bookstore at [www.ashrae.org/bookstore](http://www.ashrae.org/bookstore).

## **IMPORTANT NOTICES ABOUT THIS STANDARD**

**To ensure that you have all of the approved addenda, errata, and interpretations for this Standard, visit [www.ashrae.org/standards](http://www.ashrae.org/standards) to download them free of charge.**

**Addenda, errata, and interpretations for ASHRAE Standards and Guidelines are no longer distributed with copies of the Standards and Guidelines. ASHRAE provides these addenda, errata, and interpretations only in electronic form to promote more sustainable use of resources.**
