

ADDENDA

**ANSI/ASHRAE/IES Addendum bu to
ANSI/ASHRAE/IES Standard 90.1-2022**

Energy Standard for Sites and Buildings Except Low-Rise Residential Buildings

Approved by ASHRAE and the American National Standards Institute on November 28, 2025, and by the Illuminating Engineering Society on December 3, 2025.

This addendum was approved by a Standing Standard Project Committee (SSPC) for which the Standards Committee has established a documented program for regular publication of addenda or revisions, including procedures for timely, documented, consensus action on requests for change to any part of the standard. Instructions for how to submit a change can be found on the ASHRAE® website (<https://www.ashrae.org/continuous-maintenance>).

The latest edition of an ASHRAE Standard may be purchased from the ASHRAE website (www.ashrae.org) or from ASHRAE Customer Service, 180 Technology Parkway, Peachtree Corners, GA 30092. E-mail: orders@ashrae.org. Fax: 678-539-2129. Telephone: 404-636-8400 (worldwide), or toll free 1-800-527-4723 (for orders in US and Canada). For reprint permission, go to www.ashrae.org/permissions.

SPECIAL NOTE

This American National Standard (ANS) is a national voluntary consensus Standard developed under the auspices of ASHRAE. *Consensus* is defined by the American National Standards Institute (ANSI), of which ASHRAE is a member and which has approved this Standard as an ANS, as “substantial agreement reached by directly and materially affected interest categories. This signifies the concurrence of more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that an effort be made toward their resolution.” Compliance with this Standard is voluntary until and unless a legal jurisdiction makes compliance mandatory through legislation.

ASHRAE obtains consensus through participation of its national and international members, associated societies, and public review.

ASHRAE Standards are prepared by a Project Committee appointed specifically for the purpose of writing the Standard. The Project Committee Chair and Vice-Chair must be members of ASHRAE; while other committee members may or may not be ASHRAE members, all must be technically qualified in the subject area of the Standard. Every effort is made to balance the concerned interests on all Project Committees.

The Senior Manager of Standards of ASHRAE should be contacted for

- interpretation of the contents of this Standard,
- participation in the next review of the Standard,
- offering constructive criticism for improving the Standard, or
- permission to reprint portions of the Standard.

DISCLAIMER

ASHRAE uses its best efforts to promulgate Standards and Guidelines for the benefit of the public in light of available information and accepted industry practices. However, ASHRAE does not guarantee, certify, or assure the safety or performance of any products, components, or systems tested, installed, or operated in accordance with ASHRAE's Standards or Guidelines or that any tests conducted under its Standards or Guidelines will be nonhazardous or free from risk.

ASHRAE INDUSTRIAL ADVERTISING POLICY ON STANDARDS

ASHRAE Standards and Guidelines are established to assist industry and the public by offering a uniform method of testing for rating purposes, by suggesting safe practices in designing and installing equipment, by providing proper definitions of this equipment, and by providing other information that may serve to guide the industry. The creation of ASHRAE Standards and Guidelines is determined by the need for them, and conformance to them is completely voluntary.

In referring to this Standard or Guideline and in marking of equipment and in advertising, no claim shall be made, either stated or implied, that the product has been approved by ASHRAE.

(This foreword is not part of this standard. It is merely informative and does not contain requirements necessary for conformance to the standard. It has not been processed according to the ANSI requirements for a standard and may contain material that has not been subject to public review or a consensus process. Unresolved objectors on informative material are not offered the right to appeal at ASHRAE or ANSI.)

FOREWORD

Addendum bu updates to the language in Table G3.1 #16 based on the requirement in Section 10.4.3.4 of Standard 90.1-2022 that the energy efficiency class of proposed elevators shall be E or better per ISO 25745-2, Table 7. Since Standard 90.1-2016, the energy efficiency class has been required to be reported on design documents, but until Standard 90.1-2022 there was no requirement to specify a particular class or better.

ISO 25745-2, Table 7 includes equations for calculating kWh consumption. There is both an in-operation and standby/idle component to the calculation. Normative Appendix G is updated to help modelers develop model inputs, promote methodological consistency across projects, prevent elevator consumption from being modeled higher than justified, and ensure that the standby/idle component of elevator operation is adequately accounted for in the models. This essentially aligns Appendix G requirements with the kWh calculations in ISO 25745-2 based on the energy efficiency class. Because there was no efficiency class requirement prior to Standard 90.1-2022, the baseline requirements were estimated at class F/G. The proposed model would then be modeled with the as-specified energy efficiency class and the kWh calculated accordingly. The elevator motor schedules would be modeled identically across the baseline and proposed.

Informative Note: In this addendum, changes to the current standard are indicated in the text by underlining (for additions) and ~~striking through~~ (for deletions) unless the instructions specifically mention some other means of indicating the changes.

Addendum bu to Standard 90.1-2022

Modify Table G3.1 as shown (I-P and SI).

Table G3.1 Modeling Requirements for Calculating Proposed Building Performance and Baseline Building Performance

Proposed Building Performance	Baseline Building Performance
[...]	
16. Elevators	
<p>Where the <i>proposed design</i> includes elevators, the elevator motor, <u>and ventilation fan, and light load</u> shall be included in the model. The cab ventilation fan <u>and lights</u> shall be modeled with the same schedule as the elevator motor.</p> <p><u>The modeled elevator cab annual energy consumption shall be calculated based on elevator consumption coefficients as follows:</u></p> $\text{Annual Operating kWh} = \text{OpDays} \times \text{Coeff}_1 \times Q \times n_d \times s_{av} / 1,000,000$ $\text{Annual Standby/Idle kWh} = \text{Coeff}_2 \times t_{nr} \times (1/1,000)$ <p>where</p> <p>OpDays = <u>number of days annually where the building is occupied</u></p> <p>Q = <u>rated load of elevator, lbs (kg).</u> (kg)</p> <p>n_d = <u>number of trips per day from Table G3.2.3.17.</u></p> <p>s_{av} = <u>one-way average travel distance for the installation, ft (m)</u></p> <p>= <u>[Average floor to floor height, ft (m) × (Number of floors – 1)] × % of average travel distance from Table G3.2.3.17</u></p> <p>Coeff₁, Coeff₂ = <u>coefficients from Table G3.2.3.16 based on the energy efficiency class of the <i>proposed design</i>.</u></p> <p>t_{nr} = <u>annual nonrunning idle/standby time =</u> <u>$[24 - n_d/3600 \times (s_{av}/v + v/a + a/j + t_d)] \times \text{OpDays}$</u></p> <p>where</p> <p>v = <u>rated speed, ft/s (m/s)</u></p> <p>t_d = <u>time for the opening, opened, and closing times of the elevator doors at the landings, s. Default from Table G3.2.3.18 can be used where unknown.</u></p> <p>a = <u>average acceleration, ft/s² (m/s²). Default from Table G3.2.3.18 can be used where unknown.</u></p> <p>j = <u>average jerk, ft/s³ (m/s³). Default from Table G3.2.3.18 can be used where unknown.</u></p> <p>Exception: <u>Where the daily nonrunning (idle/standby) (E_{nr}, kWh) and daily running (E_{rd}, kWh) energy consumption, determined according to the ISO 25745-2 testing procedure, are available from the manufacturer the annual modeled elevator cab energy consumption shall be modeled based on the following calculations:</u></p> $\text{Annual operating kWh} = E_{rd} \times \text{OpDays}$ $\text{Annual standby/idle kWh} = E_{nr} \times \text{OpDays}$ <p>Informative Note: <u>The tables and methodology referenced in this section are ©ISO. This material is reproduced from ISO 125745-2:2015 with permission of the American National Standards Institute (ANSI) on behalf of the International Organization for Standardization. All rights reserved.</u></p>	<p>Where the <i>proposed design</i> includes elevators, the <i>baseline building design</i> shall be modeled to include the elevator cab <u>and ventilation fans, and lighting power.</u></p> <p><u>The elevator cab modeled annual energy consumption shall be calculated the same as the <i>proposed design</i>, with Coeff₁ = 0.756 (5.47) and Coeff₂ = 1600. If the exception is used to calculate <i>proposed design</i> annual energy consumption from E_{nr} and E_{rd}, the baseline shall be calculated using <i>proposed design</i> parameters, and the elevator coefficient equations in the proposed design column.</u></p> <p><u>The elevator peak motor power shall be calculated as follows:-</u></p> $\text{bhp} = (\text{Weight of Car} + \text{Rated Load} - \text{Counterweight}) \times \frac{\text{Speed of Car}}{33,000 \times h_{\text{mechanical}}}$ $P_m = \text{bhp} \times 746 / h_{\text{motor}}$ <p>where</p> <p>Weight of Car = <u>proposed design elevator car weight, lb</u></p> <p>Rated Load = <u>the proposed design elevator load at which to operate, lb (kg)</u></p> <p>Counterweight of Car = <u>elevator car counterweight, from Table G3.9.2, lb (kg)</u></p> <p>Speed of Car = <u>speed of the proposed elevator, ft/min</u></p> <p>$h_{\text{mechanical}}$ = <u>mechanical efficiency of the elevator from Table G3.9.2</u></p> <p>h_{motor} = <u>motor efficiency from Table G3.9.2</u></p> <p>P_m = <u>peak elevator motor power, W</u></p> <p>The elevator motor use shall be modeled with the same schedule as the <i>proposed design</i>.</p> <p>When included in the <i>proposed design</i>, the baseline elevator cab ventilation fan shall be 0.33 W/cfm (0.699 W/L·s) <u>and the lighting power density shall be 3.14 W/ft² (33.8 W/m²); both operate <u>operated</u> continuously.</u></p>

Table G3.2.3.17 Inputs for Elevator Consumption Calculations

Usage Category	Very Low	Low	Medium	High	Very High	Extremely High
Trips per day (n_d)	50	125	300	750	1500	2500
Number of Stopping Floors	Percentage of Average Travel Distance					
2	1	1	1	1	1	1
3	0.67	0.67	0.67	0.67	0.67	0.67
≥3	0.49	0.49	0.49	0.44	0.39	0.32

Informative Note: Below are the buildings typically associated with each usage category in Table G3.2.3.17. Projects should pick the usage category that best aligns with expected building operation.

Usage Category	Very Low	Low	Medium	High	Very High	Extremely High
Typical buildings	<ul style="list-style-type: none"> Residential building up to six dwellings Residential care home Small office or administrative building with few operations Suburban rail-way stations 	<ul style="list-style-type: none"> Residential building up to 20 dwellings Small office or administrative building with two to five floors Small hotels Office parking lots General parking lots Library Entertainment centers Mainline rail-way stations Stadia 	<ul style="list-style-type: none"> Residential building with up to 50 dwellings Medium-sized office or administrative building with up to ten floors Medium-sized hotel Airports University Small hospital Shopping center 	<ul style="list-style-type: none"> Residential building with more than 50 dwellings Large office or administrative building with more than ten floors Large hotel 	<ul style="list-style-type: none"> Very large office or administrative building over 328 ft (100 m) height 	<ul style="list-style-type: none"> Very large office or administrative building over 328 ft (100 m) height

Table G3.2.3.18 Defaults for Elevator Consumption Calculations

Variable	Description	Default Value	Units
a	Acceleration	3.28 (1.0)	ft/s ² (m/s ²)
j	Jerk	4.1 (1.25)	ft/s ³ (m/s ³)
t_d	Door operation time	8	s

POLICY STATEMENT DEFINING ASHRAE'S CONCERN FOR THE ENVIRONMENTAL IMPACT OF ITS ACTIVITIES

ASHRAE is concerned with the impact of its members' activities on both the indoor and outdoor environment. ASHRAE's members will strive to minimize any possible deleterious effect on the indoor and outdoor environment of the systems and components in their responsibility while maximizing the beneficial effects these systems provide, consistent with accepted Standards and the practical state of the art.

ASHRAE's short-range goal is to ensure that the systems and components within its scope do not impact the indoor and outdoor environment to a greater extent than specified by the Standards and Guidelines as established by itself and other responsible bodies.

As an ongoing goal, ASHRAE will, through its Standards Committee and extensive Technical Committee structure, continue to generate up-to-date Standards and Guidelines where appropriate and adopt, recommend, and promote those new and revised Standards developed by other responsible organizations.

Through its *Handbook*, appropriate chapters will contain up-to-date Standards and design considerations as the material is systematically revised.

ASHRAE will take the lead with respect to dissemination of environmental information of its primary interest and will seek out and disseminate information from other responsible organizations that is pertinent, as guides to updating Standards and Guidelines.

The effects of the design and selection of equipment and systems will be considered within the scope of the system's intended use and expected misuse. The disposal of hazardous materials, if any, will also be considered.

ASHRAE's primary concern for environmental impact will be at the site where equipment within ASHRAE's scope operates. However, energy source selection and the possible environmental impact due to the energy source and energy transportation will be considered where possible. Recommendations concerning energy source selection should be made by its members.

About ASHRAE

Founded in 1894, ASHRAE is a global professional society committed to serve humanity by advancing the arts and sciences of heating, ventilation, air conditioning, refrigeration, and their allied fields.

As an industry leader in research, standards writing, publishing, certification, and continuing education, ASHRAE and its members are dedicated to promoting a healthy and sustainable built environment for all, through strategic partnerships with organizations in the HVAC&R community and across related industries.

To stay current with this and other ASHRAE Standards and Guidelines, visit www.ashrae.org/standards, and connect on LinkedIn, Facebook, Twitter, and YouTube.

Visit the ASHRAE Bookstore

ASHRAE offers its Standards and Guidelines in print, as immediately downloadable PDFs, and via ASHRAE Digital Collections, which provides online access with automatic updates as well as historical versions of publications. Selected Standards and Guidelines are also offered in redline versions that indicate the changes made between the active Standard or Guideline and its previous edition. For more information, visit the Standards and Guidelines section of the ASHRAE Bookstore at www.ashrae.org/bookstore.

IMPORTANT NOTICES ABOUT THIS STANDARD

To ensure that you have all of the approved addenda, errata, and interpretations for this Standard, visit www.ashrae.org/standards to download them free of charge.

Addenda, errata, and interpretations for ASHRAE Standards and Guidelines are no longer distributed with copies of the Standards and Guidelines. ASHRAE provides these addenda, errata, and interpretations only in electronic form to promote more sustainable use of resources.
