ANSI/ASHRAE/IES Addendum h to
ANSI/ASHRAE/IES Standard 90.2-2018

Energy Efficient
Design of Low-Rise
Residential Buildings

Approved by the ASHRAE Standards Committee on January 20, 2024; by the Illuminating Engineering Society on December 21, 2023; and by the American National Standards Institute on February 21, 2024.

This addendum was approved by a Standing Standard Project Committee (SSPC) for which the Standards Committee has established a documented program for regular publication of addenda or revisions, including procedures for timely, documented, consensus action on requests for change to any part of the standard. Instructions for how to submit a change can be found on the ASHRAE® website (https://www.ashrae.org/continuous-maintenance).

The latest edition of an ASHRAE Standard may be purchased on the ASHRAE website (www.ashrae.org) or from ASHRAE Customer Service, 180 Technology Parkway NW, Peachtree Corners, GA 30092. E-mail: orders@ashrae.org. Fax: 678-539-2129. Telephone: 404-636-8400 (worldwide), or toll free 1-800-527-4723 (for orders in US and Canada). For reprint permission, go to www.ashrae.org/permissions.

SPECIAL NOTE

This American National Standard (ANS) is a national voluntary consensus Standard developed under the auspices of ASHRAE. Consensus is defined by the American National Standards Institute (ANSI), of which ASHRAE is a member and which has approved this Standard as an ANS, as “substantial agreement reached by directly and materially affected interest categories. This signifies the concurrence of more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that an effort be made toward their resolution.” Compliance with this Standard is voluntary until and unless a legal jurisdiction makes compliance mandatory through legislation.

ASHRAE obtains consensus through participation of its national and international members, associated societies, and public review.

ASHRAE Standards are prepared by a Project Committee appointed specifically for the purpose of writing the Standard. The Project Committee Chair and Vice-Chair must be members of ASHRAE; while other committee members may or may not be ASHRAE members, all must be technically qualified in the subject area of the Standard. Every effort is made to balance the concerned interests on all Project Committees.

The Senior Manager of Standards of ASHRAE should be contacted for:

a. interpretation of the contents of this Standard,
b. participation in the next review of the Standard,
c. offering constructive criticism for improving the Standard, or
d. permission to reprint portions of the Standard.

DISCLAIMER

ASHRAE uses its best efforts to promulgate Standards and Guidelines for the benefit of the public in light of available information and accepted industry practices. However, ASHRAE does not guarantee, certify, or assure the safety or performance of any products, components, or systems tested, installed, or operated in accordance with ASHRAE’s Standards or Guidelines or that any tests conducted under its Standards or Guidelines will be nonhazardous or free from risk.

ASHRAE INDUSTRIAL ADVERTISING POLICY ON STANDARDS

ASHRAE Standards and Guidelines are established to assist industry and the public by offering a uniform method of testing for rating purposes, by suggesting safe practices in designing and installing equipment, by providing proper definitions of this equipment, and by providing other information that may serve to guide the industry. The creation of ASHRAE Standards and Guidelines is determined by the need for them, and conformance to them is completely voluntary.

In referring to this Standard or Guideline and in marking of equipment and in advertising, no claim shall be made, either stated or implied, that the product has been approved by ASHRAE.
FOREWORD

Addendum h updates the air leakage maximum values and testing protocols to better align Standard 90.2 with other relevant codes and standards, including ASHRAE Standard 62.2 and the first public draft of the 2024 IECC. More specifically this addendum makes the following changes to the standard:

• Reduces the maximum air leakage (increases stringency) to be consistent with the updated requirements in ASHRAE Standard 62.2-2022
• Updates the air leakage testing protocol to allow for testing as a whole building or as multiple dwelling units in multifamily buildings to provide better coordination with the IECC

Informative Note: In this addendum, changes to the current standard are indicated in the text by underlining (for additions) and strikethrough (for deletions) unless the instructions specifically mention some other means of indicating the changes.

Addendum h to Standard 90.2-2018

Modify Section 3.1 as shown.

attached dwelling unit: a dwelling unit sharing demising walls, floors, ceilings or common corridors with another dwelling unit or occupiable space.

dwelling-unit enclosure area: the sum of the area of ceiling, floors, and walls separating a dwelling unit’s conditioned space from the exterior or from adjacent conditioned or unconditioned spaces. Wall height shall be measured from the finished floor of the dwelling unit to the underside of the floor or building element bounding an unconditioned space above.

Modify Section 3.2 as shown.

cfm₅₀ cubic feet per minute measured at a pressure difference of 0.2 in. of water (50 Pa)

Modify Section 6.3.2 as shown.

6.3.2 Maximum Envelope Air Leakage. The building or dwelling unit shall have a tested air leakage rate no greater than 5 ACH₅₀ in Climate Zones 0 through 2 and no greater than 3 ACH₅₀ in Climate Zones 3 through 8.

Modify Section 7.1.2 as shown.

7.1.2 Building Thermal Envelope Air leakage. The building thermal envelope shall have a tested air leakage rate not exceeding greater than either 3.0 ACH₅₀ or 0.15 cfm₅₀/ft² (0.75 L/s·m²) of dwelling unit enclosure area or building thermal envelope area, as appropriate, at a pressure differential of 0.2 in. of water (50 Pa).

Modify Section 8.2.4 as shown.

8.2.4 Building Thermal Envelope Airtightness Verification

8.2.4.1 Building airtightness testing to confirm that built airtightness is in accordance with the proposed design shall be performed on all residential dwellings in accordance with Normative Appendix C.

8.2.4.2 Testing shall be performed by entities approved by the AHJ.

8.2.4.3 Report of testing shall be provided to the AHJ.

8.2.4.4 Testing shall be permitted to be conducted at any point after the building has been enclosed.

Modify Normative Appendix C as shown.

C1.3 Single-Zone Single-Dwelling-Unit Buildings. Single zone buildings. Buildings comprising a single dwelling unit shall be tested with a single fan pressurization test and represent the leakage rate for the entire structure. Where the tested leakage rate exceeds 115% of the design target, diagnostics shall be performed to identify corrective air-leakage sealing measures necessary to achieve compliance. These corrective measures shall be applied and the building retested for compliance.
C1.4 Multizone Attached-Dwelling-Unit Buildings. Multizone buildings comprising two or more attached dwelling units or common areas shall be permitted to be tested either as an individual zone or by inducing equal pressures in adjacent zones, a whole building or as dwelling units in accordance with Section C1.4.1. Multizone buildings shall have a random sample of a minimum 20% of all zones tested, including a minimum of two zones, and at least one of the zones shall have at least three exterior sides. The average leakage rate of all zones tested shall determine compliance, provided that none of the zones have an ACH50 greater than 115% of the design target ACH50. Where the average leakage rate of all tested zones exceeds the design target ACH50, or where any one of the tested zones exceeds 115% of the design target ACH50, diagnostics shall be performed on the tested noncompliant zones to identify corrective air leakage sealing measures necessary to achieve compliance. These corrective measures shall be applied to all found compliant. A new random sample of previously nontested zones shall be selected for testing to verify compliance.

C1.4.1 Dwelling-Unit Testing. Where multiple dwelling units or other spaces are contained within one building thermal envelope, each unit shall be considered an individual testing unit, and the building air leakage rate shall be the weighted average of all tested unit results, weighted by each tested unit’s enclosure area as follows:

a. Where buildings have fewer than eight total dwelling or sleeping testing units, each unit shall be tested.

b. Where buildings have eight or more dwelling or sleeping testing units, the greater of seven units or 20% of the testing units in the building shall be tested, including a top-floor unit, a middle-floor unit, a ground-floor unit, and a unit with the largest dwelling units enclosure area. For each tested unit that exceeds 115% of the target air leakage rate, an additional three units shall be tested, comprising a mixture of testing-unit types and locations within the building.

c. Common areas with not less than one exterior wall in the building thermal envelope shall be tested and included in the weighted average.

Exception to (c): Corridors, stairwells, and enclosed spaces having a conditioned floor area not greater than 1500 ft² (139 m²).

Where any of the tested units exceeds 115% of the design target leakage rate, diagnostics shall be performed on the noncompliant units to identify corrective air leakage sealing measures necessary to achieve compliance. A new sampling of untested units shall be tested in accordance with Section C1.4.1(b).

C1.5 Test Protocol

C1.5.1 Air leakage tests shall be conducted under the following conditions:

a. Ventilation fans and exhaust fans are turned off.

b. Combustion equipment using conditioned air shall be disabled or put in pilot position.

c. Prior to testing, all doors, fireplaces, windows and operable windows shall be closed and not sealed.

d. Prior to testing, all intentional openings (dryer ducts, bath fans, fresh air ventilation systems, plumbing traps, fill with water) shall be sealed. Plumbing traps shall be filled with water.

e. Prior to testing, all interior doors shall be opened.

f. Heating and cooling supply and return ducts shall not be sealed.

C1.5.2 Air leakage results shall be reported as ACH50 or as cfm50/ft² (1.0 L/s·m²) of dwelling-unit enclosure area or building thermal envelope area, as appropriate, at a pressure differential of 0.2 in. of water (50 Pa). The conditioned volume (CV) of the building or building portion shall be calculated by taking the conditioned floor area per ANSI Z765 or BOMA Z65.4 and multiplying by the average ceiling height. If the ceiling is not finished, the height of the lower portion of the floor joist/rafter shall be used to determine average ceiling height. ACH50 shall be calculated using the following equation:

\[
ACH_{50} = 60 \times \frac{cfm_{50}}{CV} \quad (ft^3)
\]

\[
ACH_{50} = \frac{3600 \times L/s}{CV} \quad (L)
\]
POLICY STATEMENT DEFINING ASHRAE’S CONCERN FOR THE ENVIRONMENTAL IMPACT OF ITS ACTIVITIES

ASHRAE is concerned with the impact of its members’ activities on both the indoor and outdoor environment. ASHRAE’s members will strive to minimize any possible deleterious effect on the indoor and outdoor environment of the systems and components in their responsibility while maximizing the beneficial effects these systems provide, consistent with accepted Standards and the practical state of the art.

ASHRAE’s short-range goal is to ensure that the systems and components within its scope do not impact the indoor and outdoor environment to a greater extent than specified by the Standards and Guidelines as established by itself and other responsible bodies.

As an ongoing goal, ASHRAE will, through its Standards Committee and extensive Technical Committee structure, continue to generate up-to-date Standards and Guidelines where appropriate and adopt, recommend, and promote those new and revised Standards developed by other responsible organizations.

Through its Handbook, appropriate chapters will contain up-to-date Standards and design considerations as the material is systematically revised.

ASHRAE will take the lead with respect to dissemination of environmental information of its primary interest and will seek out and disseminate information from other responsible organizations that is pertinent, as guides to updating Standards and Guidelines.

The effects of the design and selection of equipment and systems will be considered within the scope of the system’s intended use and expected misuse. The disposal of hazardous materials, if any, will also be considered.

ASHRAE’s primary concern for environmental impact will be at the site where equipment within ASHRAE’s scope operates. However, energy source selection and the possible environmental impact due to the energy source and energy transportation will be considered where possible. Recommendations concerning energy source selection should be made by its members.
About ASHRAE

Founded in 1894, ASHRAE is a global professional society committed to serve humanity by advancing the arts and sciences of heating, ventilation, air conditioning, refrigeration, and their allied fields.

As an industry leader in research, standards writing, publishing, certification, and continuing education, ASHRAE and its members are dedicated to promoting a healthy and sustainable built environment for all, through strategic partnerships with organizations in the HVAC&R community and across related industries.

To stay current with this and other ASHRAE Standards and Guidelines, visit www.ashrae.org/standards, and connect on LinkedIn, Facebook, Twitter, and YouTube.

Visit the ASHRAE Bookstore

ASHRAE offers its Standards and Guidelines in print, as immediately downloadable PDFs, and via ASHRAE Digital Collections, which provides online access with automatic updates as well as historical versions of publications. Selected Standards and Guidelines are also offered in redline versions that indicate the changes made between the active Standard or Guideline and its previous version. For more information, visit the Standards and Guidelines section of the ASHRAE Bookstore at www.ashrae.org/bookstore.

IMPORTANT NOTICES ABOUT THIS STANDARD

To ensure that you have all of the approved addenda, errata, and interpretations for this Standard, visit www.ashrae.org/standards to download them free of charge.

Addenda, errata, and interpretations for ASHRAE Standards and Guidelines are no longer distributed with copies of the Standards and Guidelines. ASHRAE provides these addenda, errata, and interpretations only in electronic form to promote more sustainable use of resources.
